21st Century FEMA Course Manuals - Mitigation for Homeowners, Independent Study (IS-394), Disaster Readiness, Reducing Risks from Flooding, Winds, Earthquake, Fire (Ringbound) Federal Emergency Management Agency (FEMA)

This vital Federal Emergency Management Agency (FEMA) training course manual is one of the series of influential FEMA documents providing crucial material on disasters and emergency response. Mitigation for Homeowners Independent Study Course: Over the last several years, the number of natural disasters, and costs associated with them, have risen astronomically in the United States. Up until now, mitigation has not been a term that is widely used, or even known, by most homeowners. As a result, homeowners may rely mainly on the Federal Government to meet their needs after every disaster. This course is intended to provide individual citizens with an awareness of the natural hazards that affect them and their communities and the mitigation practices available to them to help reduce their degree of vulnerability. It provides the homeowner with non-technical mitigation techniques for the home, both pre-disaster (preventive) and post-disaster (corrective) that will reduce disaster costs and the impacts of natural hazards. At the end of the course, you should be able to: Explain the rationale for mitigation. Identify the natural hazards which affect your community and to which you are most vulnerable. Identify what potential risks could affect your home during disasters. Determine which mitigation actions you should undertake to reduce the risk of potential damage to your family, home and property from disaster. Course Overview - The course contains five instructional units, a pretest, and a final examination. The five units of Mitigation for Homeowners are outlined below. Unit One: Disaster Readiness: Mitigate Now/Save Later - The unit begins with descriptions of disasters that have happened, a discussion about the high costs to recover from these events, and plans in place to reduce the costs associated with disaster. Hazard mitigation is defined and successful home projects are briefly described to inform the participants of the benefits of mitigating hazards. The concepts of hazard identification, probability of occurrence, severity, effect on the home and community, and vulnerability are described and discussed. Unit Two: Reducing Risks from Flooding. Unit Two provides examples of the various mitigation steps that will protect the home and its contents from flooding. The unit is divided into measures that are low costs and those that are more complex and more expensive or used in more severe circumstances. The unit will also give the advantages and disadvantages of the more costly measures. Detailed information is given on flood insurance and an entire section has been given to myths and facts associated with the National Flood Insurance Program. Unit Three: Reducing Risks from Wind Damage - Unit Three includes sources of wind-related loss of life and property, examples of hurricane and tornado damage, and areas most susceptible to wind occurrences. The unit is divided into four categories, depicting four areas of the home that should be checked for wind protection and lists the steps to take to prevent or lessen damage. The unit also introduces FEMA Publication 320, Taking Shelter from the Storm: Building a Safe Room Inside Your Home, and ordering information to request the drawing plans. Unit Four: Preparing Your Home for an Earthquake - The unit begins by listing earthquake protection changes the homeowners can make themselves that do not require professional contractors. Following each example is a Tips section or easy reminders that will make the job go more smoothly. The unit also alerts the participants to structural jobs that may require building permits. At the end of the unit is a checklist for an earthquake hazard hunt which the homeowner conducts in the home, listing the mitigation practice and the date it was accomplished.
