Tools in Fluvial Geomorphology (Advancing River Restoration and Management) G. Mathias Kondolf, Hervé Piégay

Fluvial Geomorphology studies the biophysical processes acting in rivers, and the sediment patterns and landforms resulting from them. It is a discipline of synthesis, with roots in geology, geography, and river engineering, and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology, at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management.

Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial geomorphology in recent decades, such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical approaches as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis.

This book:

- Covers five main types of geomorphological questions and their associated tools: historical framework; spatial framework; chemical, physical and biological methods; analysis of processes and forms; and future understanding framework.
- Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective.

It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners, and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering, and interdisciplinary courses in river management and restoration.

From reader reviews:

Edward Olivieri:

With other case, little people like to read book Tools in Fluvial Geomorphology (Advancing River Restoration and Management). You can choose the best book if you want reading a book. So long as we know about how is important a book Tools in Fluvial Geomorphology (Advancing River Restoration and Management). You can add expertise and of course you can around the world by just a book. Absolutely right, mainly because from book you can understand everything! From your country until finally foreign or abroad you may be known. About simple factor until wonderful thing you could know that. In this era, we could open a book or maybe searching by internet gadget. It is called e-book. You can use it when you feel bored to go to the library. Let's learn.

Robert Ross:

Do you one among people who can't read pleasurable if the sentence chained from the straightway, hold on guys that aren't like that. This Tools in Fluvial Geomorphology (Advancing River Restoration and Management) book is readable by means of you who hate the perfect word style. You will find the data here are arrange for enjoyable studying experience without leaving also decrease the knowledge that want to give to you. The writer associated with Tools in Fluvial Geomorphology (Advancing River Restoration and Management) content conveys the thought easily to understand by lots of people. The printed and e-book are not different in the content material but it just different in the form of it. So , do you even now thinking Tools in Fluvial Geomorphology (Advancing River Restoration and Management) is not loveable to be your top record reading book?

John Damm:

This Tools in Fluvial Geomorphology (Advancing River Restoration and Management) is fresh way for you who has interest to look for some information given it relief your hunger of knowledge. Getting deeper you onto it getting knowledge more you know otherwise you who still having little bit of digest in reading this Tools in Fluvial Geomorphology (Advancing River Restoration and Management) can be the light food to suit your needs because the information inside this particular book is easy to get by means of anyone. These books create itself in the form that is certainly reachable by anyone, yeah I mean in the e-book type. People who think that in guide form make them feel sleepy even dizzy this reserve is the answer. So there is not any in reading a guide especially this one. You can find what you are looking for. It should be here for you. So , don't miss this! Just read this e-book style for your better life along with knowledge.

Tessa Krieger:

What is your hobby? Have you heard that will question when you got pupils? We believe that that problem was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. And you know that little person just like reading or as looking at become their hobby. You have to know that reading is very

important in addition to book as to be the issue. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You find good news or update regarding something by book. Many kinds of books that can you choose to adopt be your object. One of them are these claims Tools in Fluvial Geomorphology (Advancing River Restoration and Management).
